

Mücher TITAN XL

TITAN XL provides safety

Date: November 2008
Place: Altena, Western Germany
Contractor: Krutmann GmbH & Co.KG, D-Menden

Within the scope of a relocation of a small stream, GRP-pipes (manufacturer HOBAS) DN 1200 were jointed in an open trench.

Especially on applications with larger angular deflections, problems already occur on planning the site. Therefore customer-friendly solutions need to be found.

Günter Haddasch, foreman of Krutmann GmbH in Menden gets it to the point: "The MÜCHER TITAN XL safes a lot of time on installation and I am sure that it will seal. I will rest more easy then."

Also the awarding authority, Stadtwerke Altena were absolutely satisfied. The service and the quality given by Mücher® Dichtungen GmbH & Co.KG turned the balance.

The good experience with MÜCHER TITAN XL has been the decisive point on this construction site.

ADVANTAGES:

- quick and easy installation
- simple technical application
- patent-registered clamping system
- more reliability
- approved seal onto any pipe material up to 2.5 bar

Installation of MÜCHER TITAN XL Couplings: quick & easy

"MÜCHER's technical site- and preselling service is one of the main keys for the company's success" as Dipl. Wi.-Ing. Michael Paeffgen, shareholding managing director of Mücher Dichtungen® puts it.

The intensive support of engineering offices, municipalities and contractors is becoming more import for MÜCHER than ever.

"Nowadays our service starts long before the project is starting" as Paeffgen continues, "we are understanding all our contacts as customers, offering and communicating our services to all parties involved in our market."
