## P-RING

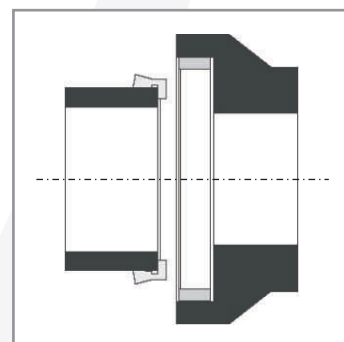

The P-Ring is used to replace the lost spigot joint when a clay pipe is cut.

The P-Ring can only be used if the socket to be connected to conforms to jointing system C.

An integrated steel ring ensures the correct positioning when joining the cut pipe end into the socket.

Before installing the P-Ring, the cut pipe end has to be cleaned and filed to remove any sharp edges.

The P-Ring is manufactured from natural rubber (see p. 5) and complies with the requirements of DIN EN 295-4.

### MÜCHER P-RING

DN	Claypipe Type	Normal Strength	High Strength
200	Keramo Steinzeug	X	X
