BUSHES

Mücher Bushes are designed to be used with Canada Plus, Type 2 B Couplings where the two pipes being connected have significantly different outside diameters. They are available in two types – moulded and fabricated.

The majority of bushes are fabricated from extruded strip of the following thicknesses to suit specific site requirements: 8 mm, 12 mm, 16 mm, 24 mm, 32 mm, 40 mm and 48 mm.

Uses:

- Bushes are used where there is a significant difference (over 12mm) in the outside diameter of the pipes to be joined, and an Adaptor Coupling is not available.
- Generally a bush is used singularly, but multiple bushes may also be used.
