

EASY-REP

flexible coupling kit for pipe repair

repair coupling for **under and aboveground**
sewerage and drainage pipelines
of **ALL** pipe materials from **DN 300**

EASY-REP

EASY-REP is a rubber flexible repair coupling supplied in an easy to install kit form.

EASY-REP is designed to allow pipe repairs to be carried out to sewerage and drainage pipelines which have been subject to local damage or cracks, without the need to replace the section of pipe or even to stop the flow of water whilst carrying out the repair.

EASY-REP can be used to repair low pressure pipes of **ALL pipe materials** and once installed in accordance with the instructions, repairs are reliable, permanent and will resist an internal water pressure of up to **0.5 bar**.

EASY-REP has been designed to the same profile of our Standard Coupling Canada Plus, Type 2B, with a width of **190 mm** and is manufactured to customer's specific size requirements.

It is essential to measure the outside diameter of the damaged pipe to ensure the best possible repair.

EASY-REP is available from DN 300 upwards.

MÜCHER's **TOX®-Technology** eliminates spot-welds on the shear band and significantly enhances the ability to resist corrosion resulting in a more robust, longer lasting repair.

End clamps and shear band are manufactured from stainless steel grade 1.4301 (AISI 304) meeting the requirements of DIN EN 10 088-2, EPDM rubber sleeve manufactured according to DIN EN 681-1.

EASY-REP

flexible coupling kit for pipe repair

A. Supply of complete kit - direct to site - including rubber glue

B. Protection goggles and gloves should be worn - coat rubber glue to the bottom of the sleeve

C. Press on top part of sleeve for approx. 10 seconds

D. Coat rubber glue to remaining free part of sleeve and press on sleeve for approx. 10 seconds

E. Assemble shear band and tighten clamps to recommended torque, see product label

F. Assemble end clamps and tighten the recommended torque, see product label
