

LATERAL CONNECTOR

M40 / M140

MÜCHER M40 / M140		
DN	Outside Diameter (mm)	Core Drill (mm)
100 PVCu	110	122
125 PVCu	125	137
150 PVCu	160	172
200 PVCu	200	212
250 PVCu	250	262
300 PVCu	315	326

The M40 (40 mm length) is used for joining thin walled pipes to concrete main sewers or concrete manholes.

The M140 (140 mm length) corresponds to ist construction of M40, however it can be cut to the wall thickness of the main sewer or chamber.

Both seals are manufactured from high quality EPDM rubber according to DIN EN 681-1.

Beside the standard seals of M40 / M140 (listed above), they can be produced for **any pipe material** up to dimension DN 300, calculating the equivalent cutting length for the corresponding pipe outside diameter.
